What will the world of tomorrow look like? Many people today believe that technology is going to help solve some of the most difficult problems we have on the Earth today. New technology may solve old problems, and it may also create new ones. 26 Each has advantages and disadvantages, as these three examples.

When we dream about the future, many of us think that we will be able to fly to the sky in our own personal flying car. We could fly at 480 km per hour, avoiding traffic lights and busy roads. However, if the cars become popular, there will be problems with traffic control.

27 3-D printers are already used to make life-size models of car parts, and man-made body parts, such as ears. As we move into the future, 3-D printing will change the way we make things and the way we treat sick people. 28

Finally, people are trying to build a robot suit. This is an electronic suit. 29 It might help people walk again after an illness or an accident. However, one disadvantage at the moment is cost.

Looking ahead, it is easy to imagine a future. We'll be able to fly to work, print out a new pair of shoes or lift a car above our heads. Although there are some problems to solve before all of this is possible, we can certainly dream of a world. 30 It can solve some of the most difficult problems we have today.

- A. No technology is perfect.
- B. New problems will be solved by technology.
- C. 3-D printing is another new technology for the future.
- D. It allows people to lift heavy things and walk a long way.
- E. The disadvantage is that such a machine is very expensive.
- F. In this world, technology makes people's lives easier and safer.
- G. 3-D printers aren't very popular with people because they are very expensive.

What will you think of when we talk about sharks (鲨鱼)? A large body, a big mouth, scary teeth, can eat a lot at one time ... right? Do you know there’s a special shark? You can see it in some waters in the world. It is WasteShark.

There is so much waste (垃圾) in the world every year, and a lot of that goes to the sea in the end. WasteShark helps with the waste. It is a drone (无人机) for cleaning up lakes, rivers, seas and so on.

The new drone can’t fly in the sky but can swim in the water. It looks like a big fish. The smart drone can work for eight to ten hours a day. Also, WasteShark uses GPS to find where the waste is and eats it before it goes into the open sea (公海). And it can test the water quality (水质).

WasteShark is like a timely rain, and it helps a lot in cleaning up waste. “If the waste ends up in the sea, it’s very hard to clean because it’s hard to get to our big open seas and clean the waste there,” said Nancy. “We’d like to clean the waste that is near the beach. It is easy and cheap.”

22. According to the passage, which of the following is WasteShark?

23. How does the writer start the passage?

A. By drawing pictures.

B. By telling stories.

C. By showing numbers.

D. By asking questions.

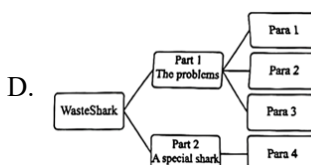

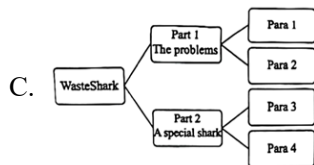

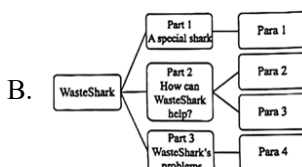

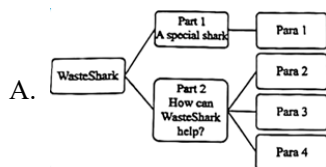

24. What can we infer (推断) from the passage?

A. WasteShark can clean the waste in the sea and in the sky.

B. WasteShark doesn’t have GPS to find the waste.

- D. It's better to clean the waste before it goes to the open sea.

some of the most difficult problems we have on the Earth today. New technology may solve old problems, and it may also create new ones. 26 Each has advantages and disadvantages, as these three examples.

When we dream about the future, many of us think that we will be able to fly to the sky in our own personal flying car. We could fly at 480 km per hour, avoiding traffic lights and busy roads. However, if the cars become popular, there will be problems with traffic control.

27 3-D printers are already used to make life-size models of car parts, and man-made body parts, such as ears. As we move into the future, 3-D printing will change the way we make things and the way we treat sick people. 28

Finally, people are trying to build a robot suit. This is an electronic suit. 29 It might help people walk again after an illness or an accident. However, one disadvantage at the moment is cost.

Looking ahead, it is easy to imagine a future. We'll be able to fly to work, print out a new pair of shoes or lift a car above our heads. Although there are some problems to solve before all of this is possible, we can certainly dream of a world. 30 It can solve some of the most difficult problems we have today.
